

SUPPLEMENT TO WET SERVICES PACKAGE

We provide the following notes and clarifications to accompany the issue of the Wet Services package:

- a. Where existing stormwater pipes are proposed to be used as part of the new drainage system, CCTV inspection of these pipes will be carried out to confirm their condition;
 - b. Some design work is still required to check for potential clash between the proposed drainage works and existing dry services;
 - c. Some design details, e.g. field sumps, are outstanding and will be provided
 - d. We suggest meeting with WCC to discuss the constraints and drainage proposals at Tasman Street (refer to drawing MP-06-501 and MP-06-701);
 - e. Potential clashes between the drinking fountain drainage lines and existing services may require some relocation of the fountains;
 - f. Additional specifications covering materials and construction requirements for the rain gardens are being prepared;
 - g. A note is included on drawing MP-06-101 regarding demarcation of public and park drainage works.
-
